

HOW DO THEY STEAL YOUR IDENTITY?

The cybercriminals

Phishing

Through fake emails or messages, the attacker tricks the victim into revealing personal information such as passwords or credit card numbers.

Social Engineering

The attacker can impersonate someone you trust, such as a friend or company representative, to obtain sensitive information.

Malware

Malicious programs, such as viruses or Trojans, can infect your device and steal stored information or capture entered data.

Password Theft

If you use weak passwords or reuse them in different accounts, an attacker can obtain them through brute force attacks or data breaches and gain access to your accounts.

Public Wi-Fi Networks

Connecting to public Wi-Fi networks without adequate security can allow attackers to intercept the information you send and receive.

Remember:

- Pay attention to the warning signs of scams.
- Protect your personal information and keep it private.
- Use strong and unique passwords.
- Enable multi-factor authentication whenever possible.
- Think before you click.
