

## A single theft can compromise everything

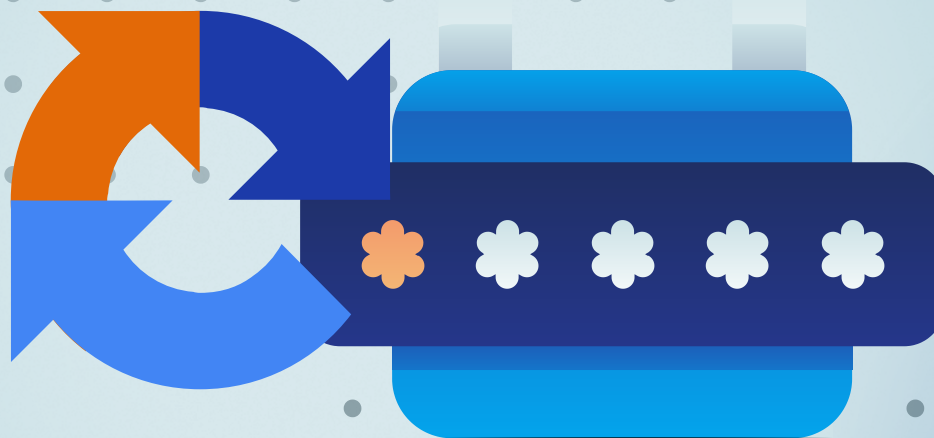

If a cybercriminal gets your password from a compromised website, they will try to use it on other services such as banking, social media and email.

Passwords are constantly leaked. Using the same one on multiple accounts puts them all at risk if one is compromised.

## Data leaks are frequent

# DO NOT REUSE

# YOUR PASSWORDS

## Identity theft

If hackers gain access to your email or social media, they can scam you and your contacts.

## Easy access to sensitive information

If you use the same password for work and personal accounts, an attack could compromise your data and that of your company.
