DO YOU CONNECT TO PUBLIC WI-FI NETWORKS?

It seems harmless, but you could be giving away your information.

Main risks

- Anyone on the same network can spy on what you do.
- Fake networks (Evil Twin).
- Theft of passwords and credentials.
- Silent malware installation.

How to protect yourself?

- Use VPN when connecting outside your home.
- Avoid entering the bank or sensitive apps.
- Only browse sites with HTTPS.
- Enable multi-factor authentication (MFA).

Cybersecurity starts with smart connectivity.
