## cybersecurity tips for 2025

1

**If hackers:**

They use AI to carry out attacks that are more realistic and harder to detect.

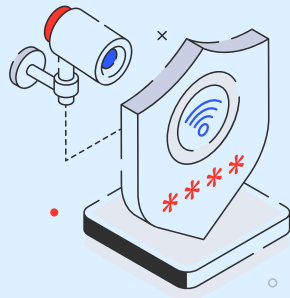

**Can:**

- Do not open suspicious emails or strange links.
- Keep your antivirus updated on your devices.

2

**If hackers:**

They can access Smart Devices (IoT).

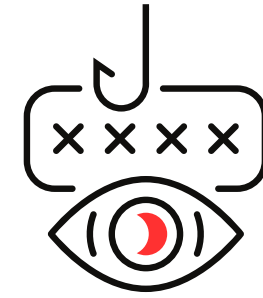

**Can:**

- Change the factory passwords on your devices.
- Always update the software of your gadgets.
- Connect them only to secure networks.

3

**If hackers:**

They try to get into your data by pretending to be something reliable.

**Can:**

- Enable multi-factor authentication (MFA) to protect your accounts.
- Review the permissions your apps have.

4

**If hackers:**

They can steal your biometric data.

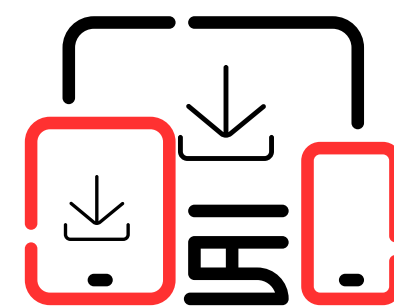

**Can:**

- Use these methods only on trusted devices.
- Read the privacy policies of the apps that ask for your data.

5

**If hackers:**

They attack apps or online platforms that you use.

**Can:**

- Download applications only from official stores such as Google Play or App Store.
- Check what permissions it asks for before installing anything.
