

THE USER AS THE FIRST PERIMETER

SAFETY STARTS WITH YOU

Even if you don't work in IT

MOST CYBERATTACKS DO NOT BREAK SYSTEMS

They take advantage of everyday moments

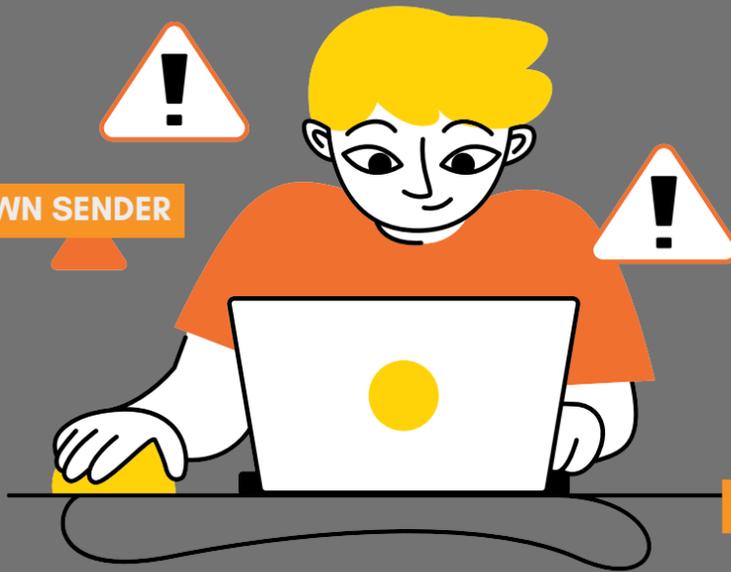

It's 8:40am.

You open your email while preparing for your first meeting.

Between pending tasks and rushing around, someone expects you not to stop to think.

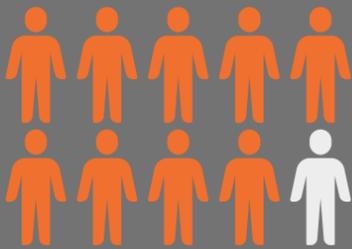

HURRY TO RESPOND

TRUST IN A KNOWN SENDER

DISTRACTION BETWEEN TASKS

9/10

SECURITY INCIDENTS

They begin with a human action.

-Verizon. Data Breach Investigations Report

HAS THIS HAPPENED TO YOU?

Did you receive an "urgent" email just before a meeting?

Were you asked to review a "quick" file without context?

Did someone from "the IT department" write to you asking for access?

Were you embarrassed to ask for fear of seeming exaggerated?

GOOD PRACTICES

If something demands urgency, stop.

Before acting, ask yourself: Does this make sense to me today?

If you weren't expecting it, be suspicious.

Before clicking or downloading, hover your cursor over the link before opening it.

If you have any questions, ask.

In your daily life, don't share passwords, or "just for today"

If something doesn't seem right, report it.

If something doesn't add up, don't solve it alone.

How many of these actions do you already take... and which ones could you start implementing today?
