

MULTIFACTOR AUTHENTICATION

WHAT YOU SHOULD KNOW

Multi-factor authentication (MFA) is a registration process multistep that verifies the owner of the account and requires users to enter more information than just a password.

Example: In addition to the password, the user must enter a code that they receive via email, answer a secret question or generate a code in an app.

This PIN can be sent by different means:

SMS

EMAIL

ONE TIME PASSWORD APP

VOICE CALL

In general, it is recommended to apply the MFA in the most critical accounts:

EMAIL

BANK

SOCIAL MEDIA

Make sure you are doubly protected. iPut up another barrier to cybercriminals.!
