

TIPS FOR NAVIGATING IN A **UNSECURED WEBSITE**

If you get "**The connection is not private**" in your browser, it is a sign that the website is not secured with a valid SSL/TLS certificate, which puts your personal data at risk.

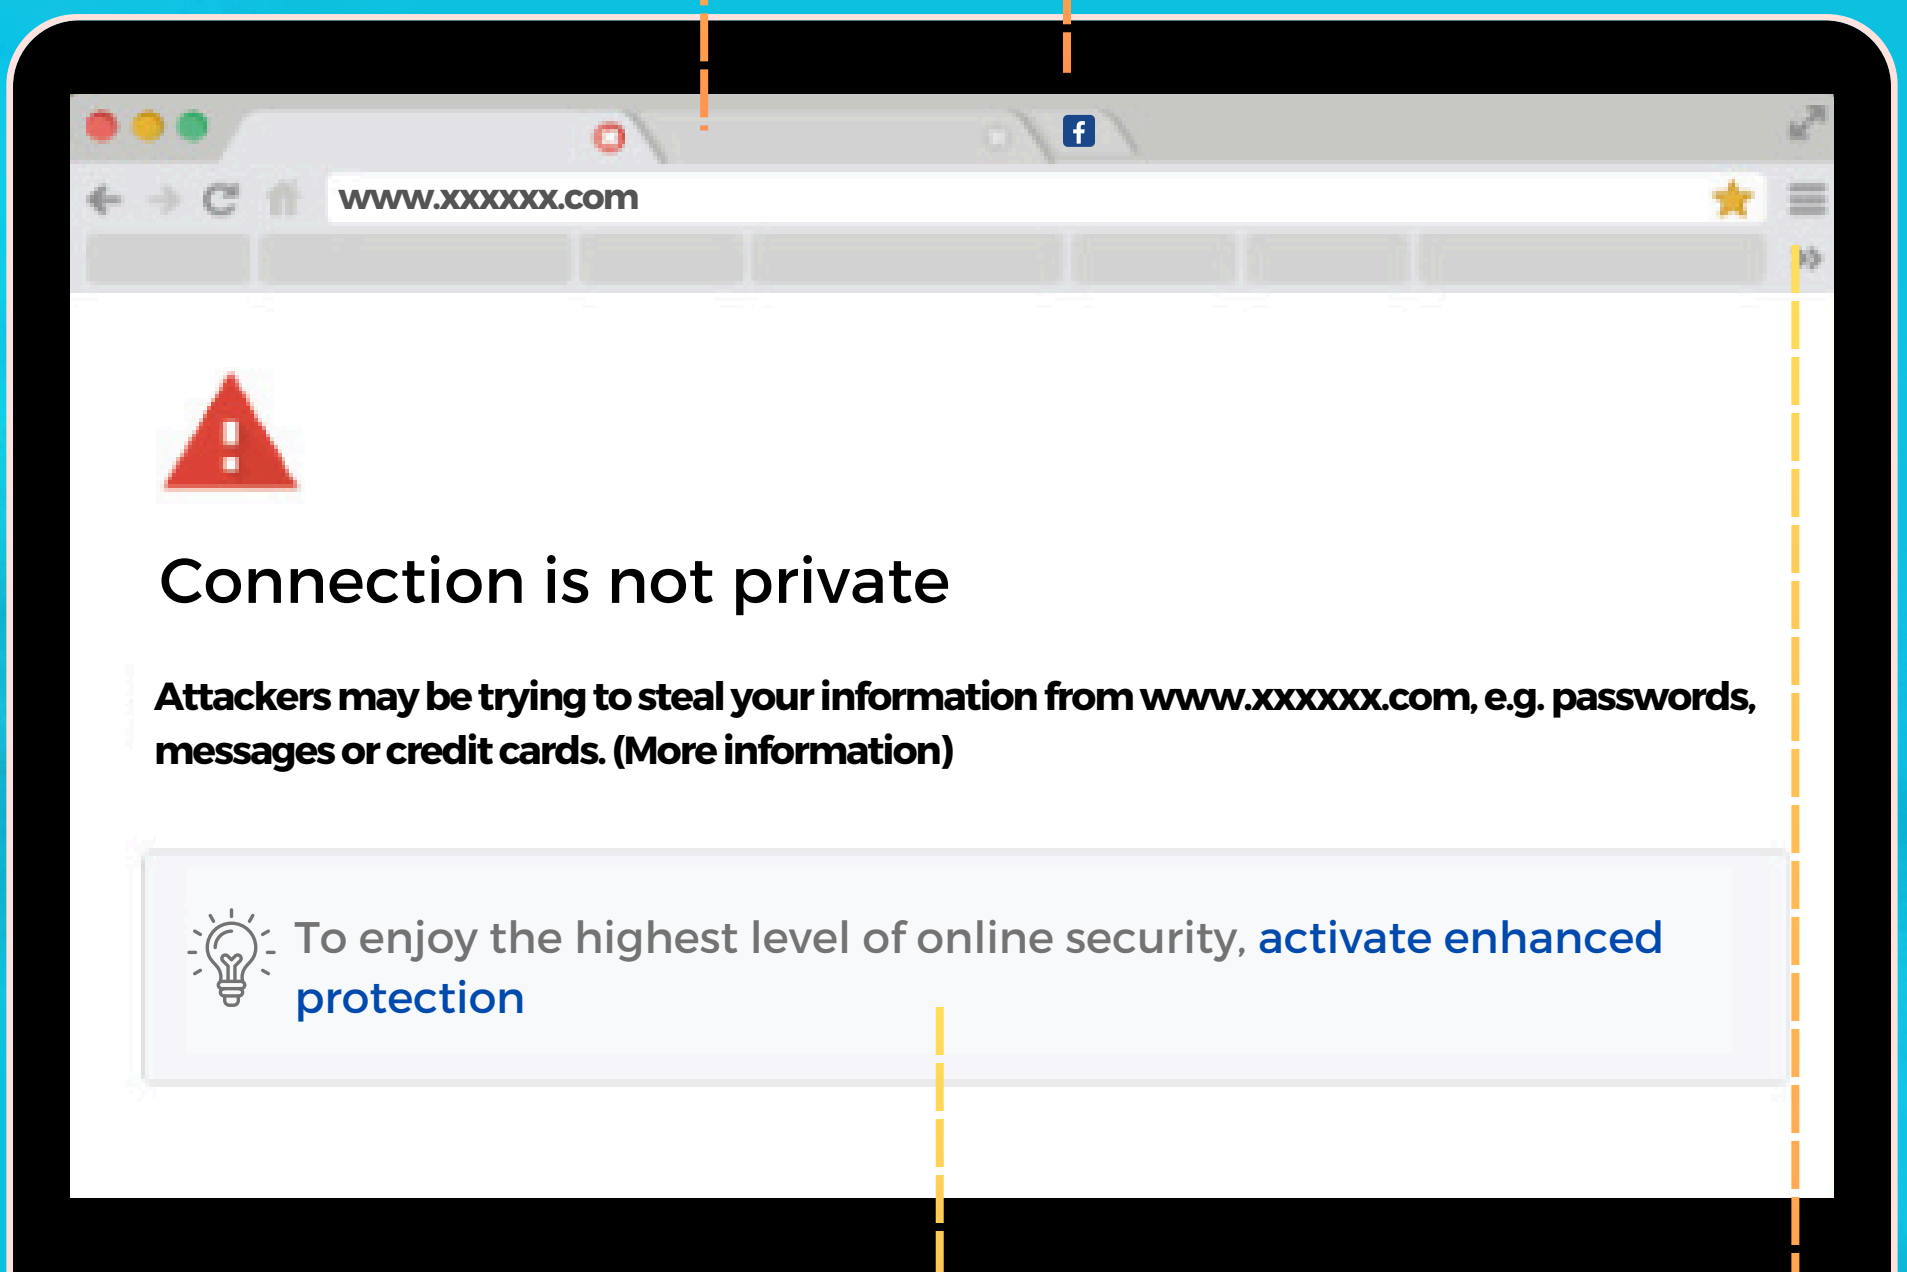

Examines the entire URL.

Analyzes the entire URL and checks the web address for subtle changes, such as modified words or characters.

Confirms legitimacy.

Be sure to confirm authenticity through official channels, you can also search for information on social networks.

Be cautious with unsolicited links.

Beware of links from unknown or unexpected sources, they could take you to fake sites as part of social engineering campaigns.

Use URL analysis tools.

With these tools you can check if your website is safe or could be malicious.
